Nathan Liu

New York, NY | ncl9100@nyu.edu | 24natel.com | linkedin.com/in/nathan-ncl-liu | github.com/ncl9100

Education

New York University — New York, NY

Bachelor of Arts in Computer Science and Data Science | Dean's List — *Sep. 2024 – May 2028*

Relevant Coursework: Probability and Statistics, Principles of Data Science I & II, Data Management and Analysis, Fundamentals of Machine Learning, Linear Algebra, Causal Inference (in progress)

Experience

Data Science Intern — Nov. 2025 – Present

NYU Entrepreneurial Institute — *New York, NY*

- Built an LLM-assisted pipeline (Perplexity, Google Search APIs) classifying 2.6k+ startup records by NYU school for segment reporting
- Shipped 5 features to a BigQuery-backed React analytics dashboard tracking 2.6k+ annual coaching sessions and 5k+ visits, including drill-down time-series charts and year-over-year comparison
- Audited 31 production data pipelines against documentation, tracing 24 discrepancies to root causes and flagging 7 untracked scripts writing to production data
- Leading CRM deduplication of ˜14k entries, building a 50-row gold set to QA duplicate-detection signals

Full-Stack AI Developer — June 2025 – Aug. 2025

Amazon China

- Trained a scikit-learn regression model on 30-day rolling prices for short-term forecasting in an AI trading assistant (Flask, React)
- Built a signal engine combining TextBlob sentiment on 40 headlines per refresh with 24h price change to classify assets as buy, sell, or hold
- Validated sentiment classification against manually labeled headlines in Jupyter and wrote 26 tests (pytest, Jest)

Outreach Coordinator — Feb. 2026 – Present

NYU Data Science Club — *New York, NY*

- Co-organized NYU's 2026 Datathon for 50+ participants, leading sponsor outreach to companies including Datadog and TikTok

Projects

HotTakes | *2nd Place, NYU Stern Sustainability Hackathon* — Oct. 2026

- Trained a gradient-boosted heat demand forecast (scikit-learn) on synthetic hourly data calibrated to Con Ed filings, reaching 8.5% MAPE vs 17.5% for a naive baseline, and presented the model in the pitch
- Validated on real metered steam from 7 buildings, cutting WAPE to 18% vs 24% and 39% for two baselines
- Compared 5 outage reserve policies in an 8,760-hour simulation, finding a reserve does not pay since storage is usually full
- Deployed a Streamlit dashboard (5 tabs, 20 inputs) with a Claude assistant that calls 4 read-only model tools

Ad Click-Through Rate Prediction (Fundamentals of ML) | *Python, pandas, scikit-learn* — Summer 2026

- Predicted clicks on 1M Avazu ad impressions, reaching 0.723 ROC-AUC and 0.411 log loss vs a 0.456 base-rate baseline
- Engineered 105 leakage-free features, adding time features after EDA showed click rates varied by hour and device
- Showed why accuracy misleads on imbalanced data: a never-click model scores 83% accuracy but 0.50 ROC-AUC

MarginGuard | *Python, DuckDB, Claude API* — Apr. 2026

- Built a Python/SQL pipeline in DuckDB joining 1.2M+ labor logs and 90K+ billing records into project-level signals
- Defined margin metrics and erosion thresholds an AI agent uses to rank the 3 highest-exposure of 405 projects

Technical Skills

Languages: Python, SQL, R, Java, C/C++, JavaScript
Data & ML: pandas, NumPy, scikit-learn, XGBoost, Matplotlib, Seaborn, Jupyter, Streamlit
Data & Cloud: BigQuery, DuckDB, PostgreSQL, Google Cloud Run, Git/GitHub
Methods: Regression and forecasting, classification, clustering, statistical inference, causal inference, root-cause analysis
